

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in the application:

**LISTING OF CLAIMS:**

1. (currently amended): A graft or a block polymer comprising at least one kind of a silicone rubber segment and at least one kind of fluorine containing elastomer segment, wherein the graft or the block polymer is obtained by reacting a fluorine containing compound having a fluorine containing elastomer segment obtained by polymerizing a fluorine containing monomer

---

(wherein  $X^1$  is an iodine atom or a bromine atom,  $R_f^1$  is a bivalent alkylene group having 1 to 30 carbon atoms and possibly containing an oxygen atom,  $R^1$  is an alkyl group having 1 to 3 carbon atoms), with a silicone rubber having at least one amino group.

2. (original): The graft or the block polymer of Claim 1, wherein the fluorine containing elastomer segment is an elastomer segment comprising a vinylidene fluoride or an elastomer segment comprising tetrafluoroethylene.

3. (previously presented): The graft or the block polymer of Claim 1, wherein the silicone rubber segment has a unit of dimethylsiloxane and /or methyl-3,3-trifluoropropylsiloxane.

4. (canceled).

5. (canceled).

6. (new): A process for preparing the graft or a block polymer of claim 1, which process comprises polymerizing a fluorine containing compound having a halogen atom at the end with at least one kind of a monomer by halogen transfer polymerization and bonding the obtained fluorine containing elastomer and a silicone rubber.

7. (new): A process for preparing the graft or a block polymer of claim 2, which process comprises polymerizing a fluorine containing compound having a halogen atom at the end with at least one kind of a monomer by halogen transfer polymerization and bonding the obtained fluorine containing elastomer and a silicone rubber.

8. (new): A process for preparing the graft or a block polymer of claim 3, which process comprises polymerizing a fluorine containing compound having a halogen atom at the end with at least one kind of a monomer by halogen transfer polymerization and bonding the obtained fluorine containing elastomer and a silicone rubber.

9. (new): The graft or the block polymer of Claim 2, wherein the silicone rubber segment has a unit of dimethylsiloxane and /or methyl-3,3,3-trifluoropropylsiloxane.
